

Project Name : Dmoney API Testing			Environment								
Tester's Name : Muksudul			Reviewed By								
Date Tested			Version								
Issue Id	Module	Issue Title	Description	Steps to Reproduce	Issue Type	Priority	Severity	Actual Result	Expected Result	Attachment	
1	Create	Customer creation with required field empty displays incorrect error message	When Admin attempting to create a customer with a required field left empty the error message displayed is "User already exists" instead of the expected message will be "Required field empty". This wrong error message can confuse users.	1. Open the website URL https://dmoney-web.vercel.app/ 2. Login as Admin 3. Navigate to the "Create User" from dashboard 4. Left the required information field empty. 5. click on "Submit" button	Functional	Medium	Medium	When Admin submitting the customer creation information form with a required field left empty the wrong error message "User already exists" is displayed	The system should display more accurate error message such as "Required field empty" when a required field in the customer creation form is left empty. This would provide clearer guidance to users about the issue	https://ibb.co/w0F0QcK	
2	Create	Incorrect status code (208) received when Admin create random customer with empty field	When the admin attempts to create a random customer with an empty field the system responds with an unexpected status code of (208) instead of the expected status code (400).	1. Open the website URL https://dmoney-web.vercel.app/ 2. Login as Admin 3. Navigate to the "Create User" from dashboard 4. Left the required information field empty. 5. click on "Submit" button	API Bug	High	Major	After attempting to create a random customer with an empty field the system responds with a status code of (208).	The system should respond with a status code of (400) when the admin attempts to create a customer with an empty required field. The status code (400) accurately indicates a "Bad Request" due to the incomplete input data.	https://ibb.co/s9yGt7b	
3	Deposit	Incorrect status code (208) received when Agent attempts to deposit invalid amount to Customer	When an agent attempts to deposit an invalid amount to a customer account the system responds with an unexpected status code of (208) instead of the expected status code (400).	1. Log in as Agent 2. Navigate to the "Deposit" 3. Enter correct customer account details 4. Enter deposit amount 5. Click on "Deposit" button	API Bug	Medium	Major	After the agent attempts to deposit an invalid amount to a customer's account the system responds with a status code of (208)	The system should respond with a status code of (400) when the agent attempts to deposit an invalid amount. The status code (400) accurately indicates a "Bad Request" due to the inappropriate input data.	https://ibb.co/H2WHmqg	
4	Withdraw	Incorrect status code (208) received when customer attempts to withdraw money with insufficient balance	When a customer attempts to withdraw money from an agent account with insufficient balance the system responds with an unexpected status code of (208) instead of the expected status code (400).	1. Log in as customer 2. Navigate to the "Withdraw" 3. Enter correct agent account details 4. Enter withdraw money amount (the entered amount should be greater then current account balance) 5. Click on "Withdraw" button	API Bug	High	Major	After the customer attempts to withdraw money from the agent account with insufficient balance the system responds with a status code of (208).	The system should respond with a status code of (400) when the customer attempts to withdraw money with insufficient balance. The status code (400) accurately indicates a "Bad Request" due to the invalid nature of the transaction.	https://ibb.co/30HqrMH	
5	Send Money	Incorrect status code (208) received when customer attempts to send money with insufficient balance	When a customer attempts to send money to another customer with insufficient balance the system responds with an unexpected status code of (208) instead of the expected status code (400).	1. Log in as Customer 2. Navigate to the "Send Money" 3. Enter correct customer account details 4. Enter Send Money amount (the entered amount should be greater then current account balance) 5. Click on "Send" button	API Bug	High	Major	After the customer attempts to send money to another customer with insufficient balance the system responds with a status code of (208).	The system should respond with a status code of (400) when the customer attempts to send money with insufficient balance. The status code (400) accurately indicates a "Bad Request" due to the invalid nature of the transaction.	https://ibb.co/KizMnpQ	
6	Payment	Incorrect status code (208) received when customer makes payment to merchant with insufficient Balance	When a customer attempts to make a payment to a merchant with insufficient balance the system responds with an unexpected status code of (208) instead of the expected status code (400).	1. Log in as Customer 2. Navigate to the "Payment" 3. Enter correct Merchant account details 4. Enter payment amount (the entered amount should be greater then current account balance) 5. Click on "Payment" button	API Bug	Medium	Major	After the customer attempts to make a payment to a merchant with insufficient balance the system responds with a status code of (208).	The system should respond with a status code of (400) when the customer attempts to make a payment with insufficient balance. The status code (400) accurately indicates a "Bad Request" due to the invalid nature of the transaction.	https://ibb.co/t28ymYX	
7	Payment	Incorrect status code (208) received when customer makes payment to merchant with invalid amount	When a customer attempts to make a payment to a merchant with an invalid amount the system responds with an unexpected status code of (208) instead of the expected status code (400).	1. Log in as Customer 2. Navigate to the "Payment" 3. Enter correct Merchant account details 4. Enter payment amount (the entered amount should be negative or zero) 5. Click on "Payment" button	API Bug	High	Major	After the customer attempts to make a payment to a merchant with an invalid amount the system responds with a status code of (208).	The system should respond with a status code of (400) when the customer attempts to make a payment with an invalid amount. The status code (400) accurately indicates a "Bad Request" due to the invalid nature of the transaction.	https://ibb.co/y5sFk2Z
